### EXPERIENCE

#### Ticket Issuing Web Application ([BugTracker](#))

Built with C#, ASP.NET MVC, Entity Framework, PostgreSQL and JavaScript

This is a tool that helps developer teams track tasks that need to be completed in ongoing projects by issuing tickets. I implemented role-based authorization using Identity to allow company administrators to create projects and assign project managers to them. These project managers can assign tickets to developers and track the status and priority of those tickets. Ticket members can leave comments, upload file attachments, and receive email notifications upon updates.

#### Blog Web Application ([CodeTimesCoffee](#))

Built with C#, ASP.NET MVC, Entity Framework, PostgreSQL and JavaScript

A technology blog web app containing multiple blogs for different categories which have their own posts. I implemented role-based authorization using Identity to have authors who can create blogs and write posts as well as editors who can modify posts. Readers can view blogs as an anonymous guest account or sign up to leave comments.

#### Movie Review Web Application ([MoviePro](#))

Built with C#, ASP.NET MVC, Entity Framework, PostgreSQL and JavaScript

A website similar to IMDB that consumes an API to fetch the latest movies along with relevant information such as ratings, cast, directors, trailer URLs, etc.

### EDUCATION

#### Buffalo State College — *Computer Information Systems*

AUGUST 2018 - JANUARY 2020

System Design & Analysis : SDLC, Wireframing, ER Diagrams

#### Coder Foundry — .NET Web Development Bootcamp

AUGUST 2021 - JULY 2022

C#, ASP.NET Core MVC, Entity Framework, SQL, JavaScript

### SKILLS

C#

ASP.NET Core MVC

Entity Framework

SQL

JavaScript

Git

HTML/CSS/Bootstrap
